The LiteSmart is a totally unique home safety light that will provide illumination only when motion is detected and the ambient light level is low. It is the only safety light that is smart enough to actually know when it’s needed.

LiteSmart will operate for up to 30,000 on/off cycles on three AA batteries (250 hours cumulative). The three-position switch: ON - when used as a hand held light, AUTO - automatically turns ON when it senses motion AND low light levels, and OFF for storage. The high-impact, light diffusing dome covers three extra bright LEDs.
