TempLite™

Temporary Power Light for Manual Transfer Switches

The TempLite™ is a surface-mount, add-on accessory light approved for use with most new or existing manual transfer switch installations. The TempLite features four extra-bright LEDs, drawing less than 20mA total, and will illuminate the face of the manual transfer switch, regardless of the switch position, when power is supplied by a portable generator. The lens is molded from Makrolon® 6485 polycarbonate for high durability.

TempLite mounts easily over the power inlet opening found on most hardwired load-side or panel style manual transfer switches. It connects to the generator neutral wire and either of the two hot leads inside the transfer switch.

Specifications

Cat. No. 6288

Rating: 20 mA @125/VAC

Material: Makrolon® 6485

 TempLite is a UL Recognized Component.

U.S. and foreign patents pending.
